

STEP 1

Cut out a patch, using the crop marks as a ruler guide.

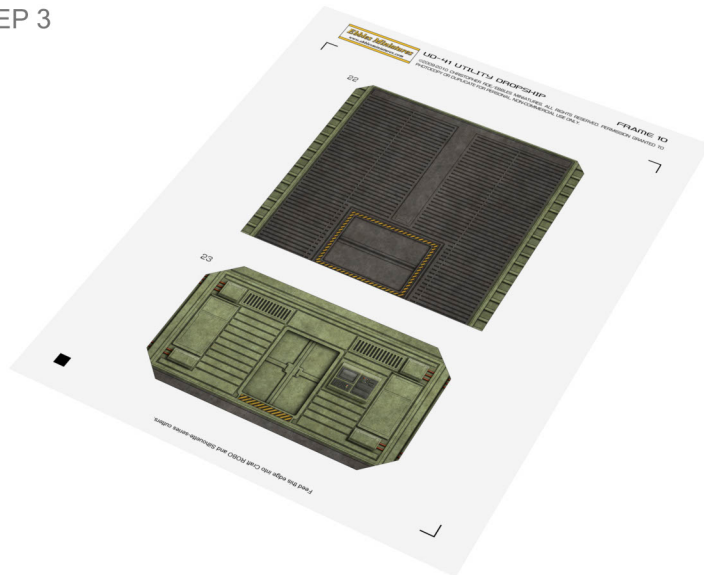

STEP 2

Align patch exactly with the bottom left mark, covering the old mark completely.

STEP 3

Done! Feed the sheet into your machine as usual.

You can print the registration mark patches on a sheet of label paper, or if you want a more forgiving application method, print the patches on regular inkjet paper and use a restickable glue stick to turn them into stickers. That way, application errors are easily reversed by just peeling off the sticker and trying again.

Each patch sheet contains 120 patches, so one sheet will make 120 pages Cameo-compatible.
