

# MARINE ASSEMBLY INSTRUCTIONS

## THE TORSO

The torso is basically a cylinder. Start with the long strip, folding it into shape, then close off the sides.

## THE SKIRT

Shape the armor skirt as shown to the left, then glue it to the bottom of the torso.

# MARINE ASSEMBLY INSTRUCTIONS

## THE ARMS

The arms are one-piece parts that consist of an inner arm shape, with the forearms and shoulders being half-cylindrical fold strips that radiate outwards. Tweezers make them easy.

1. Fold the forearm strip into place, and refine the shape if needed.
2. Fold the long shoulder strip into place, and refine the shape if needed.
3. Last of all, fold the top of the shoulder down to close off the shoulder.

For best results, color the entire unprinted side of the arms black.

## THE LEGS

Each leg is a one-piece part. The feet, thighs, and lower legs are simple half-cylinder fold strips that radiate outwards from the inner side of each leg. Tweezers make it very easy.

1. Fold the lower leg into place and refine the shape.
2. Fold the thigh strip into place and refine the shape.
3. Fold the foot strip into place. Refine the shape, if necessary, to match the image to the left.
4. Fold down the upper tabs so that they are level and flat, as shown to the left.

For best results, color the entire unprinted side of the legs black.

# MARINE ASSEMBLY INSTRUCTIONS

## MAIN ASSEMBLY

Glue the arms and legs to the torso as shown to the left.

## THE BASE

Cut out, fold, and glue the figure base together.

Glue the feet to the base, adjusting the pose of the legs slightly to your taste.

# MARINE ASSEMBLY INSTRUCTIONS

## THE HANDS

The left and right hands are flat fold-over parts. Plug them into the open wrist sockets.

For best results, color the wrist plugs black.

## THE WEAPONS

All of the hand weapons are flat fold-over parts contained within a rectangular frame. Cut out the frame, fold and glue the weapon together, then trim out the remaining whitespace. The weapons are designed to slot in next to the hands.

The model is now complete.

# XENOSAUR ASSEMBLY INSTRUCTIONS

## THE BODY

The body is a flat fold-over with splay tabs on the back for attaching the carapace. Fold the body sides together, then fold down the carapace tabs.

## THE CARAPACE

The carapace is a one piece cutout with arms and legs that fold down to the sides. Bend the tail upwards a little bit and shape the back to follow the contours of the body, then apply some glue to the carapace tabs on the body. Run a thin bead of glue down the back to the tip of the tail, then press the carapace into place gently, holding it together until the glue sets.

For best results, color the reverse side of the carapace black before gluing the carapace to the body.

# XENOSAUR ASSEMBLY INSTRUCTIONS

## THE CREST

The crest is another one-sided cutout. Bend and tease it into the rough contour of the head, making sure that the back of the crest is bent upwards a little bit.

Run a thin bead of glue from the tip of the nose to the back of the head on the body, then gently press the crest into place.

For best results, color the reverse side of the crest black before gluing it to the head.

## THE BASE

Cut out the base, then fold it and glue it together. After the glue sets, run a thin bead of glue along the bottom of the xenosaur's feet and press the xenosaur's feet onto the base gently.

The xenosaur is now complete.
